

CRAFTSWOOD

Melamine Boards COLLECTIONS

Melamine is type of laminate created by molding a melamine/formaldehyde combination into a durable plastic sheet done by applying a certain amount of pressure per square inch to the laminate.

Melamine is a low-pressure laminate (LPL) it is made with a pressure of 300-500 pounds-per-square-inch. Not like High Pressure Laminates (HPL) which is made with over 1400 pounds-per-square-inch of pressure.

ADVANTAGES OF MELAMINE:

- *Durability** – Melamine is highly durable, scratch-resistant, waterproof, stain-resistant, and easy to clean (bonus!).
- *Perfect finish** – Melamine is available in a wide selection of textures and natural wood grains, and melamine panels are a cost-effective, multipurpose option for adding color, texture, and finishes to designs and projects.
- *Budget-friendly** – Melamine board is a budget-friendly option without sacrificing quality and durability. It can save money and time during application because there is no need to sand or finish as with solid wood.
